

Anti-Rotational Sign Clips

Anti-rotational clips are predominantly used to fix road signs to posts. They are particularly effective when mounting signs to a single round post, where rotation is a concern.

Manufactured from 304 stainless steel, our anti-rotational sign post clips provide excellent mounting support for road and street name signage. The stainless steel also offers excellent rust and corrosion resistance making them suitable for long term outdoor installations.

All clips are supplied with M8 square headed bolt, nut and washer for secure fixing.

Simply insert the foot of the clip into the sign channel and twist through 90 degrees. Slide the square headed bolt into the opposite end of the sign channel to secure into the other end of the sign clip.

The internal indents on the clip help to reduce rotation.

Our screwbands and universal channel clamps are a suitable alternative for irregular shaped/size poles where a standard fixing clip would not be available.

Simply slide the the channel clamp into the sign channel and as you tighten the banding, the product will clamp to the pole to secure fixing.
