

Fully galvanised to the highest specification to prevent rust and corrosion to ensure longevity for the product.

Our galvanised steel posts are available in multiple diameters to meet all requirements.

We also hold stock of various lengths ready to be shipped and also have cutting facilities on site to fulfil large orders and or custom lengths

Within our stock, we also hold numbers of powder coated lengths in Traffic Black or Traffic Grey, however we can also offer powder coating to specific RAL codes to meet specifications if required.

Please contact us with your requirements for details.

Key Features:

- Fully galvanised to prevent rust and corrosion
- Available in multiple lengths for all requirements
- Post cap included
- Traffic Grey & Traffic Black finishes available (Limited quantities available at one time)
- Powder coating available to specific RAL colour
- On-site cutting available

| Item                      | Description                                                         |
|---------------------------|---------------------------------------------------------------------|
| Wall Thickness            | 3.0 - 3.6mm <small>(see spec sheet for further information)</small> |
| Grade                     | S275J0H                                                             |
| Heat No / Cast No.        | A537862, A538274, A537883 <small>(dependent on diameter)</small>    |
| Zinc Coating              | 90 Microns <small>(average across all diameters)</small>            |
| Yield Strength            | 366 MPa minimum                                                     |
| Ultimate Tensile Strength | 468 MPa minimum                                                     |
| Conformity                | EN 10219-1:2006 & EN 10219-2:2019                                   |
| British Standard          | BS EN ISO 1461:2009 for rust and corrosion resistance               |
